DPS17

Combined

Pressure Reducing and Surplussing Valve

Description

The DPS17 is an SG iron pilot operated valve which combines the functions of a pressure reducing valve and a surplussing valve. It is suitable for steam or gases such as compressed air.

The main pilot, fitted onto the main valve body provides control of downstream pressure.

The surplussing pilot, fitted to the side of the valve is set to close the main valve should the upstream pressure fall below the desired level. This facilitates the shutting down of the non-essential plant in order to either prevent overloading of the boiler or maintain the supply pressure to essential plant.

Sizes and pipe connections

DN15LC, DN15, DN20, DN25, DN32, DN40 and DN50. Screwed BSP (BS 21 parallel) or NPT (DN15 to DN25 only).

Standard flanges: **DN15 - DN50** BS 4504 PN16 and PN25 **DN25 - DN50** BS 10 Table H and ANSI 300

Available on request: **DN15 - DN50** JIS 10/16 and ANSI 150 **DN15 - DN20** BS 10 Table F **DN15** ANSI 300

Capacities

See TI-P006-03 for steam sizing and TI-P007-02 for compressed air. A low capacity version of the DN15 is available: Type DN15LC. The K_V maximum values shown below are full capacities and should be used for safety valve sizing purposes only.

DN15LC	1.0	DN15	2.8	DN20	5.5	DN25	8.1	DN32	12.0	DN40	17.0	DN50	28.0
--------	-----	------	-----	------	-----	------	-----	------	------	------	------	------	------

For conversion: C_V (UK) = $K_V \times 0.963$ C_V (US) = $K_V \times 1.156$

Note: Where the internal downstream pressure sensing pipe is used the valve capacity will be reduced.

Dimensions / weights (approximate) in mm and kg

Pressure / temperature limits

The product **must not** be used in this region.

A-D-E Screwed and flanged BS 4504 PN25, ANSI 300, and BS 10 Table H.

A-B-C Flanged ANSI 150.

Note: Three colour coded pressure adjustment springs are available to provide the required downstream pressure and surplussing pressure.

Yellow 0.2 bar g to 3 bar g
Blue 2.5 bar g to 7 bar g
Red 6.0 bar g to 17 bar g

Body design conditions		PN25
PMA	Maximum allowable pressure @ 120°C	25 bar g
TMA	Maximum allowable temperature	232°C
Minimum allowable temperature		-10°C
PMO	Maximum operating pressure for saturated steam service	17 bar g
TMO	Maximum operating temperature	232°C
Minimum operating temperature		0°C

Note: For lower operating temperatures consult Spirax Sarco.

Δ PMX Maximum differential pressure is limited to the PMO

Designed for a maximum cold hydraulic test pressure of 38 bar g
Note: With internals fitted, test pressure must not exceed 25 bar g

* **Note:** This product is also available in cast steel.

Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions (IM-P100-13) supplied with the product.

Installation note:

The valve should be installed in a horizontal pipeline with the direction of flow as indicated by the arrow on the valve body.

How to order

Example: 1 off Spirax Sarco DN32 DPS17 combined pressure reducing and surplussing valve. Flanged BS 4504 PN25. Fitted with blue pressure adjustment spring and red surplussing adjustment spring.
