### Free air discharge capacity For air at 15°C

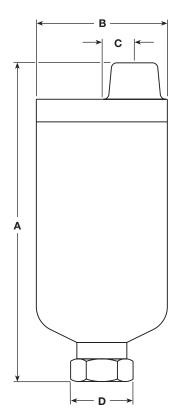

If the temperature of the air differs from 15°C, the discharge capacity from the graph can be corrected by multiplying it by the following equation:

273 + T (T is the actual temperature in °C)

It may be assumed that the temperature of the air is equal to the temperature of the water.

### Safety information, installation and maintenance

For full details see the installation and Maintenance Instructions (IM-P017-11) supplied with the product.

### Installation note:

The AE50S should be installed vertically with the inlet at the bottom. We recommend piping the discharge to a safe visible point or drain via an air break.

### Installation in superheated water:

For superheated water applications we recommend that 1 m to 2 m of 34" vertical pipeline be fitted prior to the inlet of the vent. On superheated water systems the outlet pipework must be sized to accomodate any flash steam created during discharge. Direct the outlet pipework to a safe point of discharge where there is no risk of injury to personnel or damage to property.

### Spare parts

There are no spare parts available for this sealed, maintenance free product.
